Roll And Grab

Rules Book

Yang Ziyi

No more than 20 minutes

Must played by 3 player

A competitive game which requires reaction and action

Component

Objective Cards

x50

Permanent Cards

x2

Hand Cards

3 Pairs of color poker

x36

D6 Dice

x10

Dice Holder

x1

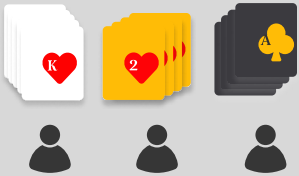

Token

x70

Set Up

- **Hand Cards:** Each player takes one colour set(Black, White or Gold) of Red Hearts ♥(A,2,3,J,Q,K) and Black Clubs ♣(A,2,3,J,Q,K) hand cards from the hand deck and keeps them hidden from other players (as their private hand).

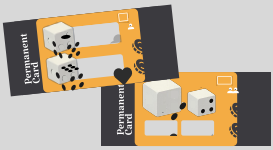

- **Dices:** Takes 10 D6 dice from the dice bag and places them into their dice holder.

- **Tokens:** Sort the token supply and place it aside for later use. Then, distribute 2 tokens to each player.

- **Permanent Cards:** Locate the two permanent cards and place them between the players as shown in the diagram (Figure 1 below).

- **Objective Cards:** Shuffle the objective card deck and place the deck face down aside the table.

- **Ready:** Take 3 random cards from the objective card deck and place them face up between the players as shown in the diagram (Figure 1-1 below). During this process, players must not look at their hand cards.

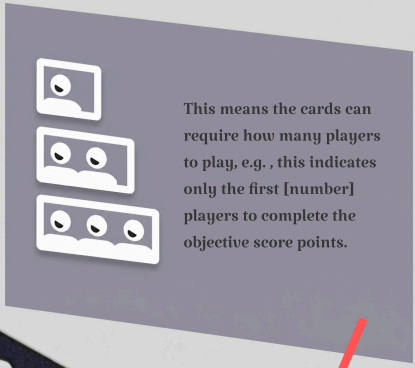

Figure 1

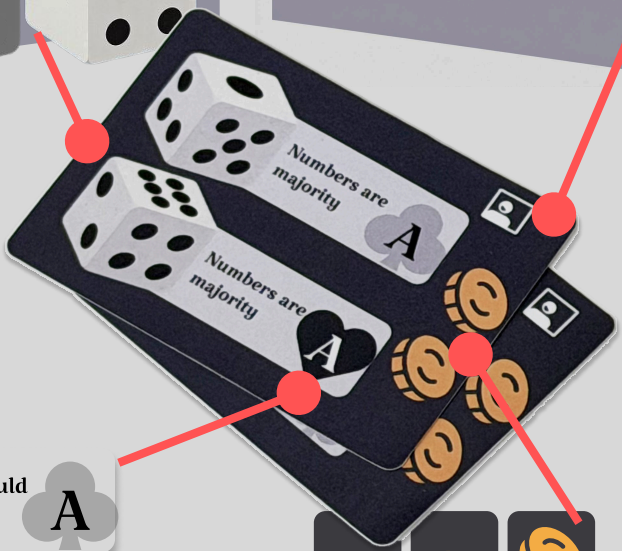

Card Breakdown

Players need to distinguish the conditions on the require dices, e.g. , Evens and Odds, Total number for dices roll of 2 and conditions without using dices.

This means the cards can require how many players to play, e.g. , this indicates only the first [number] players to complete the objective score points.

The player should play A ♣

The player should play A ♥

The players should choose the hand cards which require right shape and number, to put it on side of the objective cards

When players successfully fit the requirements, they can earn certain numbers of tokens(2-4)

Course of the Game

Key Objectives

Fast And Right = Win

= Win

- Players should use their reactivity and judgment ability to decide which objective cards they need to satisfy and to earn tokens.
- Players need to distinguish between much rewards in high-risk and less rewards in low-risk.
- The player who has the most tokens win the game

Key Rules

- Cards placed by players cannot be taken back.
- Cards must be stacked on top of the Objective cards to be considered valid.

Before Each Round

- Players need to shuffle their own cards. Once shuffled, place it face down in front of you.
- Remove the Objective cards used in the previous round. Then draw three new Objective cards from the Objective deck.
- Shake the dice holder. All players then place one hand on top of it and lift it together to reveal the dice.

How to Play

1. The goal of the game is to collect as many tokens as possible.
2. Each Objective card shows a required number of players, such as 1, 2, or 3 to recieve tokens.
3. Only the fastest certain players who play the correct hand cards may gain the tokens shown on that Objective card.
4. In some rounds, different Objective cards may be triggered by the same hand card. This creates a trade-off for players. When this happens, players must choose the Objective card that is most advantageous to them.
5. There is no limit to the number of hand cards that may be played on an Objective card. However, each new hand card played on that Objective must be placed on top of the cards already there.
6. A round ends when all players have stopped playing cards.
7. During scoring, tokens are awarded to the fastest players who played the correct hand cards.

Example of Play

Sally, Alex and Jason are playing the game. Sally plays the white hand cards, Alex plays the gold hand cards, and Jason plays the black hand cards. In this round, the number of dice showing 2 is greater than the number of dice showing 6. Both Sally and Alex puts there hand cards on this objective card, however, the white card played first so Sally recieves two tokens.

This time Jason is about to puts his hand cards onto this objective card. During this round, if Jason puts ♣A and all players successfully and correctly satisfy the conditions of the other Objective cards, Jason gains 4 tokens. If Jason plays ♥A, and any other Objective card is not correctly satisfied, Jason also scores 4 tokens. If Jason is wrong, he will get zero token on this objective card.

End of the Game

The game stops when five terms finish.

Compare the score, the player who has the most score wins the game

If two players reach the same score, the game continues until there is a winner
